

SECTION 5

Trunnion mounted valves

Full bore

BROEN
BALLOMAX®

Designed to last

Trunnion mounted valve - DN 150 - 600, PN 40/25/16

Type 3/A... - Full bore

Welding × Welding

Fully welded steel ball valve.

Materials

See next pages.

Applications

Stop valve for heating systems, district heating, cooling and industrial purposes.

Media

Water and other media not decomposing the steel. If in doubt, please contact BROEN BALLOMAX® Sales Department.

Surface treatment

Eco-friendly protection finish against corrosion.

Approvals and certificates

BROEN is certified according to ISO 9001 and environmentally certified according to ISO 14001. BROEN BALLOMAX® is approved according to the requirements of Pressure Equipment Directive (PED). All ball valves as from DN 150 are CE-marked. The 3.1 certificate is available upon request.

Notice

As standard DN 150 - 600 is delivered with Double Block and Bleed (DBB) with normal temperature range up to 150°. Temperature range up to 200° on request. We recommend to add a BROEN-Gear.

Trunnion mounted valve - DN 700 - 1000, PN 25

Type 3/A... - Full bore

Flange × Flange

Fully welded steel ball valve.

Materials

See next pages.

Applications

Stop valve for heating systems, district heating, cooling and industrial purposes.

Media

Water and other media not decomposing the steel. If in doubt, please contact BROEN BALLOMAX® Sales Department.

Surface treatment

Eco-friendly protection finish against corrosion.

Approvals and certificates

BROEN is certified according to ISO 9001 and environmentally certified according to ISO 14001. BROEN BALLOMAX® is approved according to the requirements of Pressure Equipment Directive (PED). All ball valves as from DN 350 are CE-marked. The 3.1 certificate is available upon request.

Notice

As standard DN 700 - 1000 is delivered with Double Block and Bleed (DBB) with normal temperature range up to 150°. Temperature range up to 200° on request. We recommend to add a BROEN-Gear.

BROEN-Gear - DN 200 - 800

Type 3-TPA... - Full bore

BROEN-Gear

Hand-operated gearbox.

BROEN-Gear - supports control of the fittings when the high opening torque of the valve prevents the use of a lever.

The gear is used for manual control of the fittings between the OPEN - CLOSED end positions (30° rotation angle), substantially reducing the force required for its operation. The end positions are enforced by stops that are adjusted during the installation of the gear on the fittings and then protected against regulation.

Operating torque - DN 150 - 1000, PN 40/25/16

Full bore

Operating torque

The torque stated is for guidance only; it has been obtained by measuring on new ball valves. The torque is to be understood as the pull-off torque applicable for a closed, but recently activated ball valve.

The value stated may rise to a factor of 1.5 after a long period of inactivity.
